

Building Blocks of Innovation: U.S. Patent Law - Three Perspectives on How Recent Changes Will Impact Area Inventors

Examine the practical implications of the new U.S. patent reform law and how the changes will impact you. The program is designed to help inventors and engineering managers mitigate risks, protect their inventions, and adapt their research and business practices to this new law. On a more targeted level of interest to every innovator, the program will explain the new processes by which an invention is patented, and whether that invention infringes on a competitor's product. Learn how you and your company can better respond to key patent issues:

- How "The Americans Invents Act" has dramatically altered U.S. patent law and practice
- Strategies for moving the patent process along more quickly in the United States
- In the U.S. Courts: Full disclosure required of inventors under penalty of law, and more
- Protecting your invention abroad

Individual consultations will be available at the program close for those interested.

About the speaker

Robert P. Michal, a Partner with the New York City intellectual property law firm of Lucas & Mercanti, LLP, concentrates his patent practice on application preparation and prosecution, as well as counseling clients on patent validity, infringement and patentability. He focuses on patenting devices and processes that involve business methods, software, and electrical engineering, especially chip design and manufacture, and cellular technologies.

Lucas & Mercanti, LLP, practices almost exclusively in patent, trademark and copyright law, and serves chemical, automotive, pharmaceutical, plastics, computer software, manufacturing, medical devices and consumer electronics industries. Its clientele include multi-billion dollar corporations, international businesses, and universities.

**Tuesday, January 24
8:30 a.m.-11:00 a.m.**
