COPYRIGHTED MATERIALS: BEST PRACTICES

Recommend Course Resources

- Use materials available through our Library, whenever possible
  - If recommending/requiring a journal article (e.g., journal club, PBL, lecture), select one preferably from among the 7500+ electronic journals for which the Library holds licenses.
  - If recommending/requiring a book chapter, select one preferably from one of the 2500+ electronic books for which the Library holds licenses.
  - Provide complete citations for any copyrighted materials that the OCED staff lists on the secure course website, accessible by both course faculty and students. For example:

- If materials are not available from our library
  - Suggestions for the purchase of new materials should be made as soon as possible to circulationdesk@med.cornell.edu.
  - Fair Use guidelines permit one-time use (scanned or hard copies) of copyrighted materials ([http://www.copyright.cornell.edu/policy/Fair_Use_Checklist.pdf](http://www.copyright.cornell.edu/policy/Fair_Use_Checklist.pdf)) if factors favoring fair use outnumber those weighing against fair use in each of the following categories:
    - Purpose of use (e.g., educational better than commercial)
    - Nature of copyrighted material (e.g., scientific data better than original creative work, such as a play)
    - Amount of material copied (e.g., less than 10% of total work)
    - Effect on the market for the original (e.g., must be spontaneous, last-minute, and one-time use)

  Although the guidelines suggest a balance of each of the 4 areas, the “market” factor carries the most weight. Thus, use of copyrighted materials (not linked to the Library) more than once would strongly disfavor Fair Use.

  - If scanning or distributing copies of a book chapter (under Fair Use guidelines, above), the title and copyright pages must be included.
• Materials may be placed on Reserve in the library (e.g., 2-3 hard copies of chapters or articles; entire books or journals). A student may then make an individual copy for him/herself of the required/recommended material. (http://library2.med.cornell.edu/Reserves)

NOTE: If, after one-time use of material for which the Library does not have a license, the Library staff will help faculty
  o Look into possible purchase of license to use the material.
  o Find an alternative source that is already licensed or in public domain
  o Identify how to request and pay for use of copyrighted material.

☐ Preparing PowerPoint Slides/Handouts for Lectures and Presentations

• When searching for digital or print images (including photographs and videos) to include in your PowerPoint slides, visit http://library.med.cornell.edu/Library/HTML/images.htm for a list of resources in the free or government domain, as well as some with limited usage policies.

• In your PowerPoint slides or handouts, give proper attribution, whenever possible, for any figures, tables, or illustrations. For example:

  Coronary atheroma with rupture of fibrous cap and occlusive thrombus
  (Doe J. JSM 2002;99:1022)
